"Standard Divergence Trend"

Is this indicator package for you?

- 1. Do I already use divergence signals as part of my trading setups?
 - If so, am I currently using divergence patterns using the MACD, RSI, or Stochastic lower studies?
- 2. Does my current trading setup attempt to identify the trend and enter at potential pullbacks within the trend?
- 3. Do I typically identify trend direction using swing pivots within the price action?
- 4. Do I believe that back-testing my setups will help me be a better trader?
- 5. Am I willing to put in the time and effort to perform exhaustive back-testing and analyze the results to find optimum parameters for my setups?
