

“Standard Divergence Trend”

Is this indicator package for you?

1. Do I already use divergence signals as part of my trading setups?
 1. If so, am I currently using divergence patterns using the MACD, RSI, or Stochastic lower studies?
2. Does my current trading setup attempt to identify the turning points (trend reversals) in the market?
3. Do I typically identify trend direction using swing pivots within the price action?
4. Do I believe that back-testing my setups will help me be a better trader?
5. Am I willing to put in the time and effort to perform exhaustive back-testing and analyze the results to find optimum parameters for my setups?
